

## BEC EnviroSeries Conference 2017

### Towards a Smart Sustainable City Potential and Opportunities for Hong Kong

#### Programme Overview

As the world is close to breaching several environmental limits – from climate change to biodiversity loss – and as urban living becomes the norm, it is increasingly important for cities to be designed and managed in an environmentally sustainable way. The “smart city” approach, i.e. the use of smart data analytics and innovative ICT, is a way to minimise negative environmental impact, enhance liveability and well-being as well as capture business advantage.

As the flagship event of Business Environment Council, this EnviroSeries conference will explore how a smart city approach can be leveraged to achieve these multiple objectives. We will invite leaders from business and government, policy makers, entrepreneurs and academia from across regions to talk about various aspects of a smart and sustainable city. We aim to inspire out-of-the-box thinking and to foster business and government collaboration for a more efficient, competitive and sustainable Hong Kong.
