ENVIROSERIES

TRANSFORMING BUSINESS FOR SUSTAINABILITY

BEC EnviroSeries Conference

1 December 2021

BEC Auditorium and Online

Event Programme

COVID-19 has reshaped the way we live our lives, forcing us to re-examine priorities, re-consider the status quo and innovate solutions to thrive under the 'new normal'. Early on, as everyone fought the pandemic through lockdowns around the world, it was expected that sustainability would move down the list of priorities with the business sector facing certain economic downturn. In fact, we observed the opposite trend with even more ambitious actions to combat climate change, address circularity and enhance contributions to building a sustainable living environment.

Learning from this shared pandemic experience, there is an accelerated shift in business focus to long-term value creation that considers the needs of stakeholders beyond shareholders including consumers, employees and the wider society. In an increasingly unpredictable world, the expectations stakeholders have of the business sector change rapidly and companies must respond. Taking a reactive stance is not good enough. Leadership must transform to be more proactive to pre-empt emerging risks and openly embrace opportunities.

The announcement of a series of blueprints this year by the HKSAR Government on key environmental policies including waste management and resource circularity, popularisation of electric vehicles, air quality management, and carbon neutrality offers a glimpse of a sustainable Hong Kong in the future. Achieving sustainability requires multi-sector collaboration for transformative change and the business community is at the forefront of this transformation through learning, sharing and leading responsible business practices.

Objectives of the conference:

Following the June 2021 EnviroSeries Conference entitled "Redefining Business Leadership for Green Growth", this conference aims to continue the conversation on business transformation and how that would enable the building of a green and sustainable Hong Kong. Specifically, the conference will (a) share, showcase and discuss best practices and success stories in business transformation from selected industries, and (b) inspire BEC members and the wider business community to push for transformational strategies and ambitious actions conducive to long-term sustainability and the creation of shared value for society.

Date: 1 December 2021 (Wednesday)
Time: 09:45 – 16:35
Venue: BEC Auditorium and Online

Session 1: Transforming Buildings and Construction Towards Net-Zero Carbon

The property and construction sector contributes 39% of energy-related global carbon dioxide emissions. In Hong Kong, buildings accounts for over 90% of electricity consumption, translating into 60% of greenhouse emissions. In this session, industry leaders will showcase ongoing initiatives that transform energy consumption and management in construction sites and discuss ways to address 'upfront carbon' through innovation and collaboration.

Session 2: Transforming Logistics and Supply Chain for Resilience

The growing importance of supply chain sustainability is partly driven by challenges such as climate change, extremely weather events and the global pandemic that present additional risks to companies. In addition, the conventional approach in supply chain management that focuses mainly on speed and profit is no longer good enough, as business partners and customers are expecting greater environmental stewardship and social responsibility throughout the entire supply chain. This session will focus on ways to make the supply chain resilient, agile, sustainable and transparent.

Session 3: Transforming Manufacturing through Digitalisation and Circularity

Re-industrialisation and advanced manufacturing are gathering pace and poised to take off in Hong Kong. This session will discuss ways to re-vitalise and transform manufacturing while minimising its impact on the environment and the community through digitalisation, circular design, and other sustainable business practices.

Session 4: Transforming Financial Services for Green Growth

From the adoption of digital technology to the promotion of sustainable finance, the financial services industry is constantly changing and upgrading in response to the latest market development and disruptions. In this session, industry experts and forerunners will discuss how post-COVID green growth and a net-zero economy will drive and shape future financial services, how financial institutions can influence a greener future, and what hardware and soft skills are needed to support the industry's transformation.

KEYNOTE SPEECH & INTERVIEW AND SESSION 1
